- 2XX(Responses)
 - 200 - Response Generated successfully
- 3XX (Redirection)
- 4XX (Client Errors)
 - 404 - resource not found
- 5XX(Server Errors)

HTML

- Hypertext Markup Language

Tags -> Elements

It is a word enclosed in the angle brackets < >

Opening Tag

Closing Tag

Empty Tag

Root Tag

Opening tag

<html>,<body>,<p>,<a> , etc

<p>This is a para</p>

Closing tag

</html>,</body>,</p>, , etc

Empty Tags

<hr>,
,,etc

Root Tag

<html> ,</html>

index.html

```
<html> // Root Tag
```

```
<head>
```

```
// metadata of this html page
```

```
<head>
```

```
<body>
```

```
// UI
```

```
<body>
```

```
</html>
```

Live Server

- Add it to the vs code from the extensions
- It is by default configured for the http protocol on port 5500
- To access the html pages we have the use the below url
127.0.0.1:5500/page01.html
localhost:5500/page01.html

Head

- Inside the head tag we can use

1. meta

- metadata for our page

2. title

- to add title to our page

3. link

- It is used to link the external resources

4. style

- To add the Internal CSS to our Html page

5. script

- To add the Javascript to our html page

6. base

- to add the base url for our application

body

- Textual Tags

- Resource Tags

- List

- Table
