

Assignment 07

Q1 Use the Sunbeam Registration Form HTML page created in earlier assignment. Provide validations for this page. When user clicks on Register button, save the details in the session storage. The script should be using

1. basic Java script selectors first
2. then using the jQuery selectors

The following validations must be done:

1. **Name Validation:** Only alphabets allowed (max 10 characters)
2. **Birthdate Validation:** Must be a past date and user must be at least 18year old
3. **Password Validation:** Greater than 8 characters, must contain a '#' and at least one digit
4. **All Fields are mandatory**
5. **Form Submission Prevention:** Only allows submission if all validations pass

[Note: Display appropriate messages in case of invalid data]
